

Data Wrangling in R

<http://sisbid.github.io/Data-Wrangling/>

Course Info

Course name	Data Wrangling in R
Instructors	<u>Carrie Wright</u> and <u>Ava Hoffman</u>
Course website	<u>http://sisbid.github.io/Data-Wrangling/</u>
Goals	Teach you how to get and clean data
Pre-reqs	Hopefully some R programming

What we will cover in this course:

- 1) Why data wrangling is important?
- 2) Version control - Git/GitHub
- 3) Importing data (and outporting)
- 4) Subsetting data
- 5) Summarizing data
- 6) Cleaning data
- 7) Reshaping data
- 8) Data merging and joining
- 9) Functional programming (efficiently applying functions)
- 10) Working with factors, strings, dates
- 11) Working with genomic data in R

The Tidvyerse

Newer packages designed for data science that make R code more intuitive.

How many people feel
about data wrangling

How we feel about data
wrangling

Carrie

About us

Ava

About

Carrie Wright is a Senior Staff Scientist at the Fred Hutchinson Cancer Research Center. Dr. Wright's work is focused on innovating ways to make data science and computational biology more accessible. She is a member of the [Open Case Studies](#) team, the [Genomic Data Science Community Network \(GDSCN\)](#), and the [Informatics Technology for Cancer Research \(ITCR\) Training Network \(ITN\)](#). She also currently leads the [ITCR Training and Outreach Working Group](#).

Previously, Dr. Wright was an Assistant Scientist in the Department of [Biostatistics](#) at the [Johns Hopkins Bloomberg School of Public Health \(JHSPH\)](#) and a member of the [Johns Hopkins Data Science Lab \(DaSL\)](#).

Prior to joining the JHSPH, Dr. Wright was a Postdoctoral Fellow at the [Lieber Institute for Brain Development \(LIBD\)](#), where her research focused on uncovering genetic mechanisms in psychiatric disease (with a particular emphasis on non-coding RNA) through the utilization of data science tools. At LIBD, Dr. Wright co-founded the [LIBD rstats club](#), a community designed to encourage others to learn more about R programming and statistics. Dr. Wright has also served as an instructor for the [Baltimore Underground Science Space](#) and the [Johns Hopkins Center for Talented Youth](#).

Open Case Studies

What is the Open Case Studies (OCS) project?

The Open Case Studies project is an educational resource that educators can use in the classroom to teach students how to effectively derive knowledge from data in real-world challenges.

RESUME / CV

AVA HOFFMAN

BALTIMORE, USA · AVAMARIEHOFFMAN @ GMAIL.COM

Hi! 🙋

I'm a data scientist and ecologist. I'm currently exploring ways to make genomics research more accessible by connecting communities to cloud-based resources. I get really excited about things at the intersection of ecology and data, like population genetics and statistical modeling in nature. Lately, I've been especially interested in how plants evolve in man-made ecosystems (cities!) and how we can link those findings to public health outcomes.

I like coding, climbing things, everything DIY, and taking stuff apart to see how it works. I'm also working to get a community upcycling collective called **Bed Roll Baltimore** going!

Genomic signatures to guide the use of chemotherapeutics

Anil Potti^{1,2}, Holly K Dressman^{1,3}, Andrea Bild^{1,3}, Richard F Riedel^{1,2}, Gina Chan⁴, Robyn Sayer⁴, Janiel Cragun⁴, Hope Cottrill⁴, Michael J Kelley², Rebecca Petersen⁵, David Harpole⁵, Jeffrey Marks⁵, Andrew Berchuck^{1,6}, Geoffrey S Ginsburg^{1,2}, Phillip Febbo^{1,2,3}, Johnathan Lancaster⁴ & Joseph R Nevins^{1,2,3}

Using *in vitro* drug sensitivity data coupled with Affymetrix microarray data, we developed gene expression signatures that predict sensitivity to individual chemotherapeutic drugs. Each signature was validated with response data from an independent set of cell line studies. We further show that many of these signatures can accurately predict clinical response in individuals treated with these drugs. Notably, signatures developed to predict response to individual agents, when combined, could also predict response to multidrug regimens. Finally, we integrated the chemotherapy response signatures with signatures of oncogenic pathway deregulation to identify new therapeutic

A man with a black beard, wearing a blue long-sleeved shirt and a brown vest, stands with his hands on his hips, looking out over a city. The city features golden domes and buildings, set against a backdrop of green hills and a blue sky with white clouds. The scene is framed by a dark red border.

**ON THE ONE
HAND...**

DATA PIPELINE

The design and analysis of a successful study has many stages, all of which need policing.

- Most of the attention is on the last step
- This course is about all the steps that come before
- They are **critical** for getting things right

The garden of forking paths: Why multiple comparisons can be a problem, even when there is no “fishing expedition” or “p-hacking” and the research hypothesis was posited ahead of time*

Andrew Gelman[†] and Eric Loken[‡]

14 Nov 2013

“I thought of a labyrinth of labyrinths, of one sinuous spreading labyrinth that would encompass the past and the future . . . I felt myself to be, for an unknown period of time, an abstract perceiver of the world.” — Borges (1941)

Explorable Multiverse Analyses

Pierre Dragicevic (Inria), Yvonne Jansen (CNRS - Sorbonne Université), Abhraneel Sarma (University of Michigan)

Matthew Kay (University of Michigan), Fanny Chevalier (University of Toronto)

With **explorable multiverse analysis reports**, readers of research papers can explore alternative analysis options by interacting with the paper itself. This new approach to statistical reporting draws from two recent ideas: **multiverse analysis**, a philosophy of statistical reporting where paper authors report the outcomes of many different statistical analyses in order to show how fragile or robust their findings are; and **explorable explanations**, narratives that can be read as normal explanations but where the reader can also become active by dynamically changing some elements of the explanation.

<https://explorablemultiverse.github.io/>

And so we data wrangle

## ALLERGIES

Last Updated: 01 Dec 2011 @ 0851

Allergy Name: TRIMETHOPRIM  
Location: DAYT29  
Date Entered: 09 Mar 2011  
Reaction:  
Allergy Type: DRUG  
Drug Class: ANTI-INFECTIVES, OTHER  
Observed/Historical: HISTORICAL  
Comments: The reaction to this allergy was MILD (NO SQUELAE)

Allergy Name: TRAMADOL  
Location: DAYT29  
Date Entered: 09 Mar 2011  
Reaction: URINARY RETENTION  
Allergy Type: DRUG  
Drug Class: NON-OPIOID ANALGESICS  
Observed/Historical: HISTORICAL  
Comments: gradually worsening difficulty emptying bladder

## MEDICATION HISTOR

Last Updated: 11 Apr 2011 @ 1737

Medication: AMLODIPINE BESYLATE 10MG TAB  
Instructions: TAKE ONE TABLET BY MOUTH TAKE ON GRAPEFRUIT JUICE--  
Status: Active  
Refills Remaining: 3  
Last Filled On: 20 Aug 2010  
Initially Ordered On: 13 Aug 2010  
Quantity: 45  
Days Supply: 90  
Pharmacy: DAYTON  
Prescription Number: 2718953

Raw & processed data

“Data are values of qualitative or quantitative variables, belonging to a set of items.”

“Data are values of qualitative or quantitative variables, belonging to a set of items.”

**Set of items:** Sometimes called the population; the set of objects you are interested in

“Data are values of qualitative or quantitative **variables**, belonging to a set of items.”

**Variables:** A measurement or characteristic of an item

“Data are values of **qualitative** or **quantitative** variables, belonging to a set of items.”

**Qualitative:** Country of origin, sex, treatment

**Quantitative:** Height, weight, blood pressure

Data sharing

1. The raw data.
2. A tidy data set
3. A code book describing each variable and its values in the tidy data set.
4. An explicit and exact recipe you used to go from 1 -> 2,3

---

### Abstract

A huge amount of effort is spent cleaning data to get it ready for analysis, but there has been little research on how to make data cleaning as easy and effective as possible. This paper tackles a small, but important, component of data cleaning: data tidying. Tidy datasets are easy to manipulate, model and visualise, and have a specific structure: each variable is a column, each observation is a row, and each type of observational unit is a table. This framework makes it easy to tidy messy datasets because only a small set of tools are needed to deal with a wide range of un-tidy datasets. This structure also makes it easier to develop tidy tools for data analysis, tools that both input and output tidy datasets. The advantages of a consistent data structure and matching tools are demonstrated with a case study free from mundane data manipulation chores.

# A tidy data set

One variable per column  
One observation per row  
One table per “kind” of data with  
Linking variables across tables

# Code book

anything doesn't make sense.

Files:

**1 Demographics:** tab 1 is schizophrenia patients, tab 2 is controls.

A. Cohort: M = Mannheim (Germany), C = Cologne (Germany), H= Hopkins. We had a few of our own patients so we included them too.

B. patient identification number

C. Age at time of CSF collection

D. Gender

E. BMI

F. Ethnicity (mostly Caucasian)

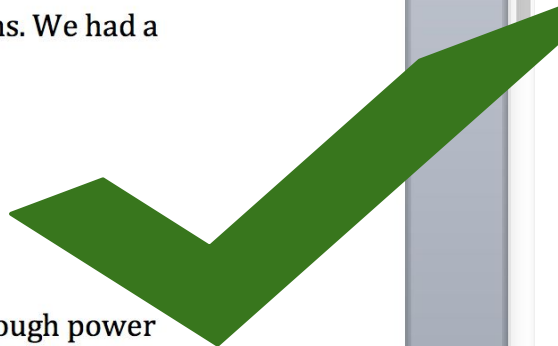

G. Diagnosis: DSM/ICD-10 diagnosis

H. Group: control, schizophrenia, or prodromal. I don't think we have enough power to run them as three groups so I combined prodromal and schizophrenia. I don't know how sure if this was ok. Is it appropriate to do a ttest for SZ?

I. Medication: mostly untreated

J. Education more or less than 13 years

K. current smoking status: yes or no

41
42 ▾ ## Load the data
43
44 You will need to download the GEUVADIS ballgown object from this site: https://github.com/ozgeezee/ballgown_code
45
46
47 ▾ ```{r loaddata,dependson="load"}```
48 load("fpkm.rda")
49 pd = ballgown::pData(fpkm)
50 pd$dirname = as.character(pd$dirname)
51 ss = function(x, pattern, slot=1,...) sapply(strsplit(x, pattern), function(y) y[[slot]])
52 pd$IndividualID = ss(pd$dirname, "_", 1)
53 tfpkm = expr(fpkm)$trans
54 ^
55
56 ▾ ## Subset to non-duplicates
57
58 You will need the GEUVADIS auality control information and population information available from these
1:1 [f] (Top Level) ⇅
```

R/Python Code  
Input raw data -> output tidy  
No parameters

Step 1 - take the raw file, run version 3.1.2 of summarize software with parameters  $a=1$ ,  $b=2$ ,  $c=3$   
Step 2 - run the software separately for each sample  
Step 3 - take column three of outputfile.out for each sample and that is the corresponding row in the output data

**Explicit instructions**  
**Versions of software**  
**Parameters included**

Step 1 - take the raw file, run version 3.1.2 of summarize software with parameters  $a=1$ ,  $b=2$ ,  $c=3$   
Step 2 - run the software separately for each sample  
Step 3 - take column three of outputfile.out for each sample and that is the corresponding row in the output data

**Vague instructions**  
**Missing versions**  
**Skipped steps**

When..	Be sure to...	So Do this...	Avoid this...	Why?
Naming variables (aka assigning column headers)	Use meaningful variable names	`AgeAtDiagnosis`	`ADx`	`ADx` is an unclear and uninformative abbreviation
Naming variables	Avoid spacing in column headers	`AgeAtDiagnosis`	`Age At Diagnosis`	Spacing in variable names makes the analyst's life more difficult
Naming variables	Use consistent capitalization	`AgeAtDiagnosis`	Using both `AgeAtDiagnosis` and `ageatdiagnosis`	Using consistent column names across tables/spreadsheets simplifies any merging the statistician may have to do.
Naming variables	Avoid using separators, but if it's necessary, use an underscore ( _ )	`IGF1` (or `IGF_1`)	`IGF.1`, `IGF-1`, `IGF/1`, `IGF,1`	Separators (commas, periods, hyphens, slashes, spaces etc.) often have different meanings in coding languages than they do in text. Avoiding them avoids error.
Coding variables	Avoid unnecessary spaces	`male`	`male `	That extra space after `male ` makes it different from `male` without a space.
Coding variables	Be consistent!	`male`	`Male`,`male`, and `M`	In the eyes of the statistician, `Male`,`male`, and `M` could be incorrectly perceived as three different values.
Coding variables	Be careful of spelling errors	`male`	`maale`	That extra `a` makes these two different categories.
Coding date and time	Use ISO 8601 coding	`YYYY-MM-DD`	`MM/DD/YY` and `Month Day, Year`	Consistency simplifies the analyst's life, and YYYY-MM-DD will not be misconstrued if opened in Excel.
Coding missing data	Not leave any cells blank and use a consistent value	`NA`	`0`, `9`, red-highlighted blank cells, `.`; `''`, ...	Each cell should be filled with a consistent value. Pick a way to denote missingness (ideally `NA`) and stick with it. Avoid using numbers or punctuation to denote missing data.
Entering data	Stick to text and numbers	Convey all information with direct text/numerical entry	Using cell highlighting or font color to convey information	Your analyst may not use the same platform for analysis as you used for data entry, so avoiding font color and cell highlighting will minimize issues.
Generating an Excel file	Save the data in an appropriate format	Use one worksheet per table and save as CSV or text files	Multiple worksheets	Statisticians require this format to import your data onto other platforms.
Entering Data	Avoid entering unnecessary lines of text at the start	Start your first row with variable names	Adding lines of text	This violates the rules of tidy data and makes processing more difficult. Include this information in the "Code book" instead.
Opening files in Excel	Know and avoid its pitfalls	Consistently include one value per cell and be careful of date and time data.	Using macros, splitting cells, and merging cells	These formats are not amenable to data analysis on other platforms.

# Rules for Tidy Spreadsheets

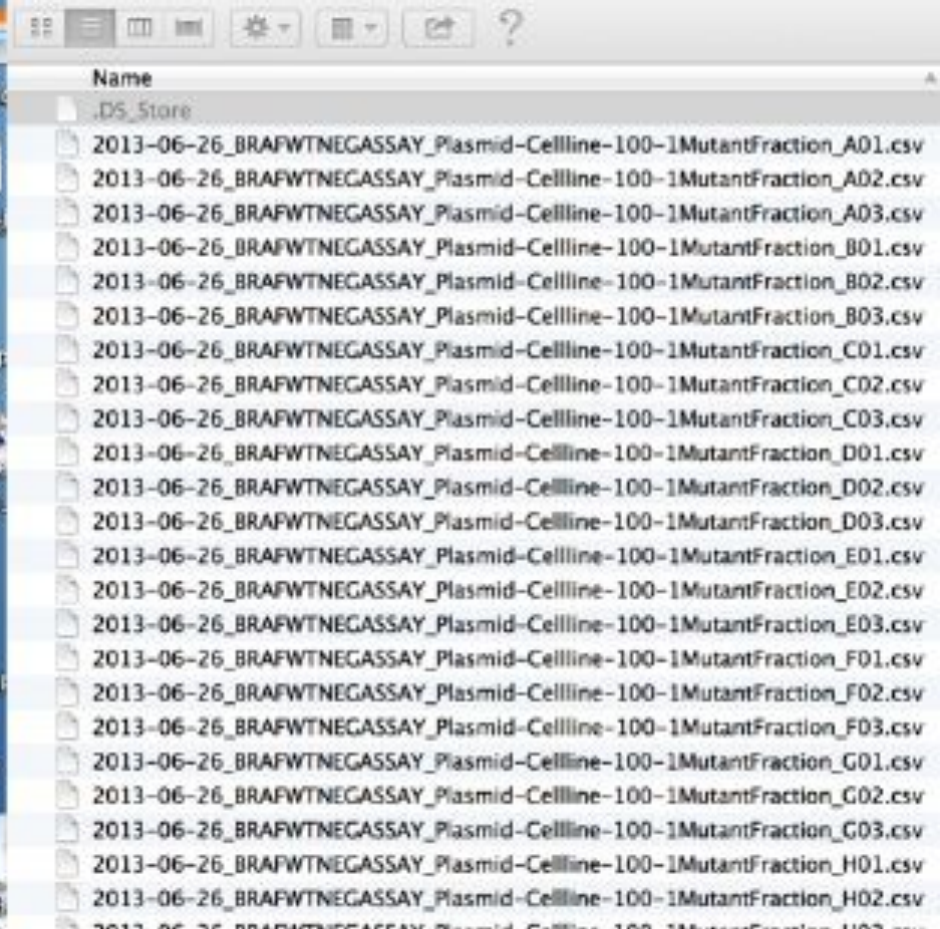

1. Be consistent
2. Choose good names for things
3. Write dates as YYYY-MM-DD
4. No empty cells
5. Put just one thing in a cell
6. Don't use font color or highlighting as data
7. Save the data as plain text files

Organize thyself

"File organization and naming are powerful weapons against chaos."

Last updated: 02-Mar-2018

The folders in this project are:

- *data* - is the folder where you can find all the collected data.
- *figures* - is where you can find all the plots, data pictures, and other images.
- *code* - is where you can find code files for collecting, cleaning up, or analyzing data.
- *products* - is where you can find reports, presentations, or products

Data on crime is obtained from International Crime Data collected between 2015-2018 and is publicly available. Data on happiness is collected from the Survey of International Happiness.

# The R Project for Statistical Computing

## Getting Started

R is a free software environment for statistical computing and graphics. It compiles and runs on a wide variety of UNIX platforms, Windows and MacOS. To **download R**, please choose your preferred [CRAN mirror](#).

If you have questions about R like how to download and install the software, or what the license terms are, please read our [answers to frequently asked questions](#) before you send an email.

## News

- [The R Journal Volume 7/1](#) is available.
- [R version 3.2.1 \(World-Famous Astronaut\)](#) has been released on 2015-06-18.
- [R version 3.1.3 \(Smooth Sidewalk\)](#) has been released on 2015-03-09.
- [useR! 2015](#), will take place at the University of Aalborg, Denmark, June 30 - July 3, 2015.
- [useR! 2014](#), took place at the University of California, Los Angeles, USA June 30 - July 3, 2014.

The image shows a browser window displaying the RStudio website. The browser's address bar shows "www.rstudio.com". The website has a dark blue navigation bar with the RStudio logo and links for Home, RStudio IDE, Shiny, Training, Projects, About, and Blog. The main content area features a large blue circular logo with a white 'R' on the right. To the left of the logo, the text reads "Welcome to RStudio" in a large, bold font, followed by "Software, education, and services for the R community" in a smaller font. Below this, there are three light gray boxes, each containing a heading, a short paragraph of text, and one or two buttons.

RStudio Home RStudio IDE Shiny Training Projects About Blog

# Welcome to RStudio

Software, education, and services for the R community

## Powerful IDE for R

RStudio IDE is a powerful and productive user interface for R. It's free and open source, and works great on Windows, Mac, and Linux.

[Download now](#) [Learn more](#)

## R training and education

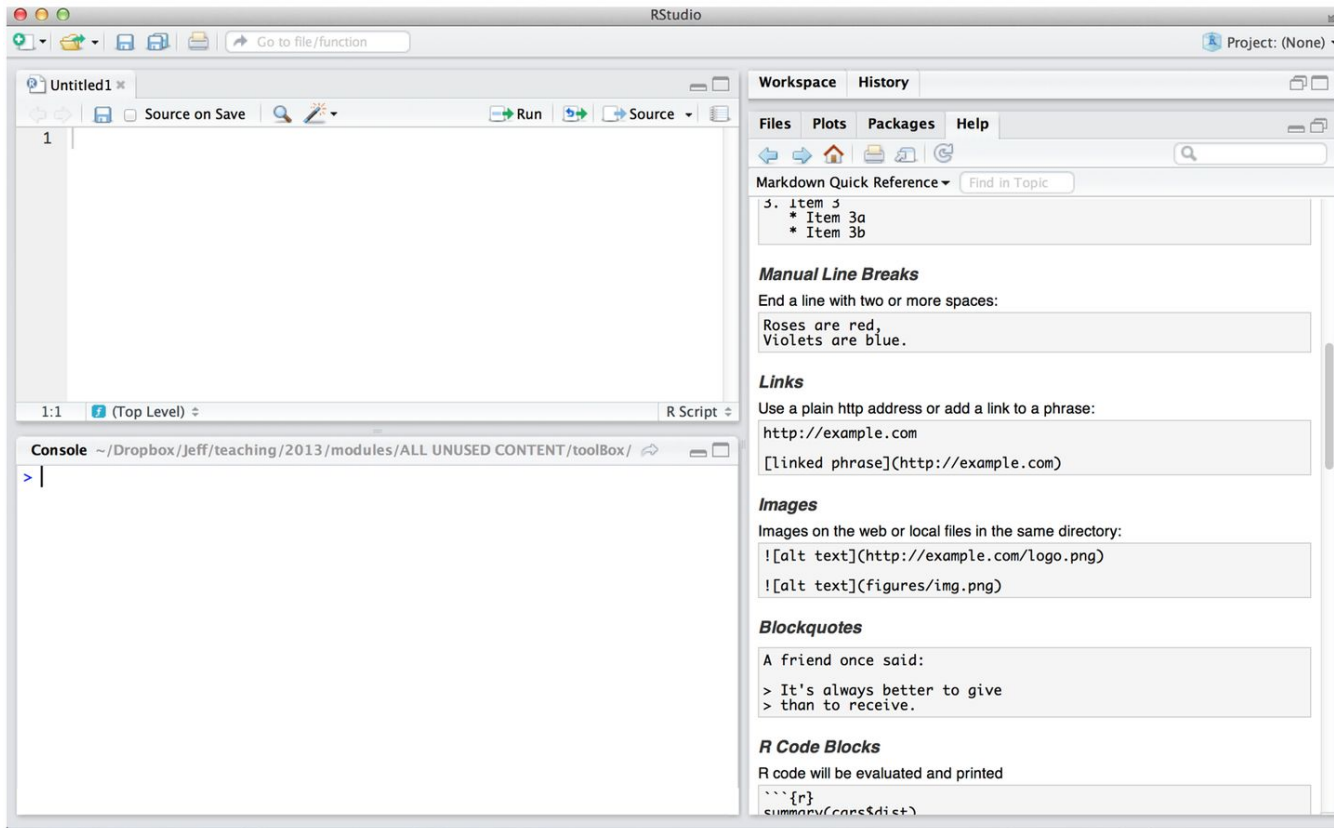

We've got hands-on courses for beginners and even R experts. Customize an on-site training or enroll in one of our public workshops.

[Request on-site](#) [View courses](#)

## Open source R packages

Our developers and expert trainers are the authors of several popular R packages, including ggplot2, plyr, lubridate, and others.

# Welcome to AnVIL

The NHGRI AnVIL (Genomic Data Science Analysis, Visualization, and Informatics Lab-space) is a project powered by Terra for biomedical researchers to **access data**, **run analysis tools**, and **collaborate**.

Find how-to's, documentation, video tutorials, and discussion forums [↗](#)

## View Workspaces

Workspaces connect your data to popular analysis tools powered by the cloud. Use Workspaces to share data, code, and results

## View Examples

Browse our gallery of showcase Workspaces to see how science gets done.

## Browse Data

Access data from a rich ecosystem of data portals.

<https://anvil.terra.bio>

What is AnVIL???

# Migrate Your Genomic Research to the Cloud

Analyze large, open & controlled-access genomic datasets with familiar tools and reproducible workflows in a secure cloud-based computing environment.

-  [Launch Terra](#), AnVIL's cloud computing environment.
-  Create a virtual cohort in AnVIL's [Gen3 Data Explorer](#).
-  Discover and launch repeatable workflows with [Dockstore](#).
-  Explore emerging support for cross-platform data sharing and analysis via the [NIH Cloud Platform Interoperability effort](#).

# AnVIL is “renting computers”

## Standard Computing

- You buy a laptop one time
- You get that one laptop
- You pay little per use

A screenshot of a Jupyter Notebook interface. The top bar shows the workspace name "WORKSPACES" and the file name "E\_1\_DESeq2Analysis.ipynb". The notebook content includes an "Introduction" section, an "Installation" section with instructions for installing packages, and a "Load the DESeq results:" section with code for loading the results. The code includes comments and R commands like "suppressPackageStartupMessages()", "library(DSESeq)", "library(ggplot2)", "ANVIL::avfiles\_restore()", and "dds <- readRDS()".

```
In [1]: # Load packages
suppressPackageStartupMessages({
 library(DSESeq)
 library(ggplot2)
})

In [2]: # Move the result saved in the bucket to the compute workspace
ANVIL::avfiles_restore(source = "DESeq_result.RData")

Load the results
dds <- readRDS("DESeq_result.RData")
dds

Copying gs://fc-70e0133b-f0f4-456e-8e0e-834b2053af18/DESeq_result.RData...
/ [0/1 files] 0.0 B/ 22.4 MiB 0% Done
/ [1/1 files][264.0 KiB/ 22.4 MiB] 1% Done
- [1/1 files][22.4 MiB/ 22.4 MiB] 100% Done
```

## Cloud computing

- You use any web browser
- You rent the computers
- You pay per hour/gigabyte/etc.

# It can feel a little weird

## Purchased car

- You buy the car
- You fill up at a station
- You pay less per mile

## ZipCar

- You don't buy the car
- You pay by the mile
- You may pay more per mile

# AnVIL Data Dashboard

Extensive unrestricted and protected data sets already available within AnVIL

- 246 cohorts (CCDG, CMG, GTEx, 1000G, eMerge)
- 285k subjects
- 3Pb and rapidly growing
- Open access (e.g. 1000G), dbGaP authenticated (e.g. GTEx) and consortium authenticated (e.g. CCDG) options available

The screenshot displays the AnVIL Dataset Catalog interface. At the top, there is a navigation bar with 'Overview', 'Learn', 'Datasets', 'News', 'Events', 'Team', 'FAQ', and 'Help'. Below this is a search bar and a filter section with various categories: Consortium (1000 Genomes, CCDG, CMG, Convergent Neuro), Cohorts (Alzheimer's disease, asthma, atherosclerosis, atrial fibrillation), Data Types (Exome, RNAseq, Whole Genome), Consent Code (DS, DS-ASD, DS-ASD-IRB, DS-ASD-IRB-COL), and Access (Consortium Access, Controlled Access, Open Access). A 'Search Summary' table provides an overview of the data, and a 'Search Results' table shows specific dataset entries.

Consortium	Cohorts	Samples	Subjects	Size (TB)
1000 Genomes	1	3,202	3,202	72.98
CCDG	196	250,770	243,226	2,381.24
CMG	36	11,424	10,063	73.61

## AUTHORIZATION DOMAIN

# AnVIL Analysis Platforms

- + Code, text and plots in one document
- + Supports coding in Python or R
- Least scalable, not a complete IDE

- + Graphical interface for thousands of tools and workflows
- + Highly accessible and reproducible
- Tools must be preconfigured to use

- + Feature rich IDE for programming in R
- + Rich statistics & ML and visualizations
- Limited support for other programming languages

- + Extremely scalable and flexible
- Most technically demanding
- Unpredictable and potentially large costs

# AnVIL Analysis Platforms

 R Studio®

- + Feature rich IDE for programming in R
- + Rich statistics & ML and visualizations
- Limited support for other programming languages

Also great!
